

Generating New Thinking Through Lean Management & Systematic Good Practice

Enterprise Excellence Ireland 2018 will attract senior-level executives and decision-makers from the Irish processing & services community to create an environment in which to network, do business and access knowledge on the latest developments, trends, strategies and policies relating to Ireland's business sectors.

Enterprise Excellence Ireland 2018 will bring together delegates from the Irish manufacturing & business sectors who are responsible for the efficiency, development and financial performance of their operations within Ireland and across the world, making this event a must attend conference for any organisation working to achieve sustainable operations.

Given its location, and the fact that the event is supported by the Irish government organisation responsible for the development and growth of Irish enterprises in world markets and by Ireland's inward investment promotion agency most of the 700+ participants will come from Ireland. There will also be a large number of speakers and attendees from overseas.

Enterprise Excellence Ireland 2018 will consist of **32 best practice case studies** from a wide range of sectors, by companies of all sizes around a common theme of driving operational excellence; **2 plenary sessions**; **4 themed workshops** and numerous networking opportunities. The case studies will be grouped into 'streams' focusing on different aspects of 'lean'. Building on its long-standing relationship with Enterprise Ireland and activities to promote industrial competitiveness, the EU-Japan Centre for Industrial Cooperation is supporting the Enterprise Excellence Ireland 2018 event, including organising the afternoon plenary discussion on 'driving improvement and competitiveness in a digital age'.
