

PROBLEM – GREENHOUSE GAS EMISSIONS CAUSE CLIMATE CHANGE

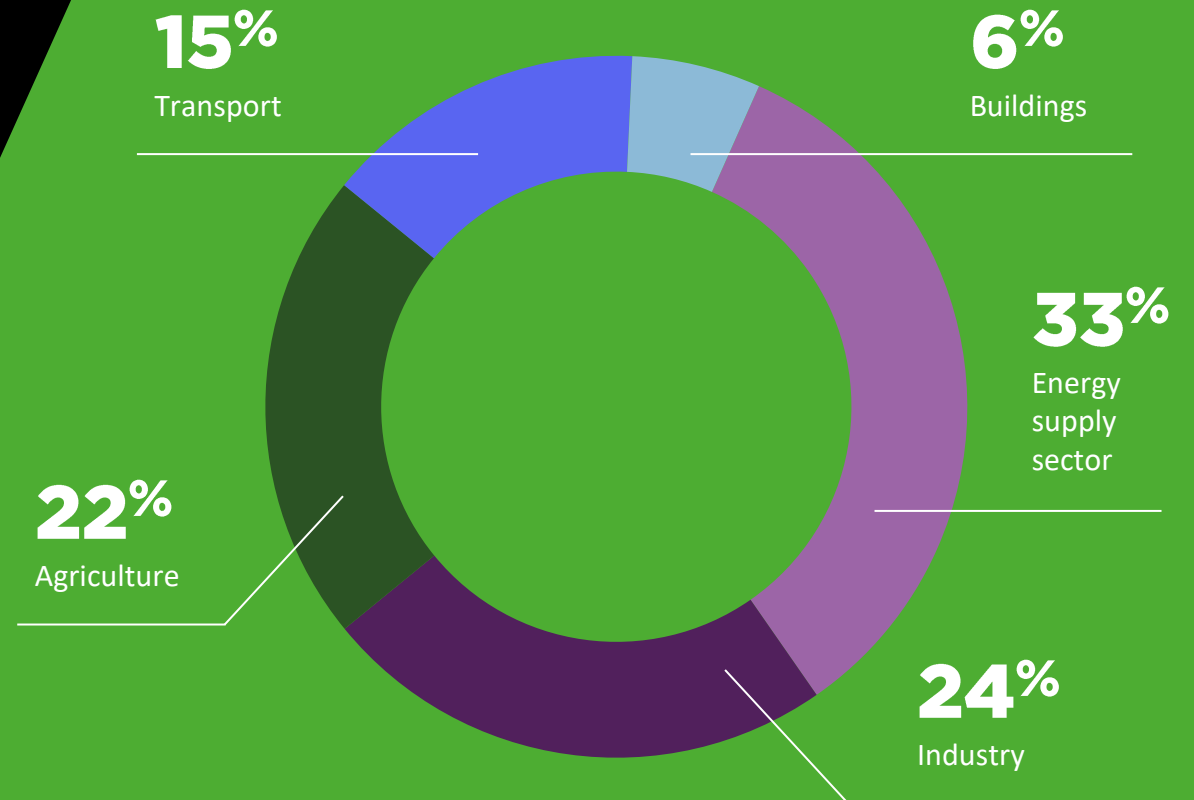

Agriculture is
responsible for almost a

22% of the world's
greenhouse gas
emissions.¹

GREENHOUSE GAS EMISSIONS SOURCES

SOLUTION NR 1

AUGA M1

One AUGA M1 tractor will be saving **100t CO2 per year**

In 2021, organic food producer of Lithuania introduced the world's first hybrid biomethane and electric tractor for professional farm use – **AUGA M1**.

Biomethane – is one of the **greenest** types of biofuel. Methane, collected from livestock waste and converted to biomethane, **offsets more emissions** per unit of energy in its production and use cycle **than it emits**.

By 2023, such tractors will be working in fields of Lithuania

SOLUTION NR 2

SPECIALIZED FEED TECHNOLOGY

A single cow can make **up to 99 kg of methane** gas per year. Applying specialized feed technology – **50% less emissions** per one tone of cow's milk will be achieved.³

Methane is much more powerful at trapping heat than CO₂, making its global warming impact more than **80 times** greater in the short term.¹

Livestock produce **14.5%** of global greenhouse gas emissions. The majority of that is in the form of **methane**.²

Lithuania's organic food producer developing a **specialised feed technology** aimed at reducing methane emissions from cattle digestion processes.

SOLUTION NR 3

FREEZE-DRYING

SUPER
GARDEN

01

Sustainability of raw material.

99% of raw material is processed during freeze-drying process

02

Less logistic cost.

Efficient and sustainable logistics, which reduce CO2 emission during transportation and storage

03

Reduction of food waste by 30%.

Long shelf life and remaining vitamins and nutrients all year round

HEALTHY SNACKING IN AN INTERACTIVE WAY BY 3D PRINTING

100% plant-based
natural product

no added sugar

with the increased
biological value from
freeze-dried powder

lactose-free

remaining 98% vitamins
and nutrition value

gluten-free

vegan friendly

SAVE THE PLANET WITH JOY !
